

Triggers & Email Templates

Viral Ideas Marketing

Two-prompt signal taxonomy + Email 1 / Email 2 system
Modeled on BIGVU Campaign 198 (2.0% reply rate, 40 interested)

Generated 2026-05-16

Prepared by Outreach Magic / Kinetyca

CONFIDENTIAL — Internal Use Only

What This Is

The complete signal taxonomy and email template system for Viral Ideas Marketing outbound. Modeled on the live structure of BIGVU's Campaign 198 (2.0% reply rate, 40 interested replies across 25,000+ sends). The structure is intentionally simple. The variable is the trigger line.

The system uses two signal-finding prompts that run in priority order:

- **Prompt A — Pharma-specific** — run first for pharma, biotech, healthcare, med device leads
- **Prompt B — Universal** — run for all leads. Fallback for pharma leads where Prompt A finds nothing

For agency or fintech leads, skip Prompt A and run Prompt B only.

Each signal produces a different Email 1 trigger line. The rest of Email 1 stays identical. Email 2 is the lead-magnet pivot (free 5-cut repurposing pack) and is the same across all signals.

Signal Mix — Prompt A (Pharma-Specific)

Run first when the lead is in pharma, biotech, healthcare, med device, or pharma-adjacent industries. Stop at first match. If no signal found, fall through to Prompt B.

#	Signal	Recency window	Where to look
A1	FDA approval / new indication / new device approval	last 90 days	Drugs@FDA, FDA press releases, BioPharma Dive, FiercePharma, company press releases, SEC 8-K filings
A2	Clinical trial milestone / Phase III readout / endpoint announcement	last 90 days	ClinicalTrials.gov, company press releases, biopharma trade press
A3	Upcoming medical congress with accepted abstract / poster / symposium	next 60 days	Conference programs and late-breaker lists: ASH, ASCO, AHA, ESMO, AAD, ACR, AAOS, BIO, JPM Healthcare, ENDO, DDW
A4	Currently using a named pharma video agency of record	verified in last 12 months	Case study credits, press releases, LinkedIn employee bios. Agencies to flag: Klick Health, Razorfish Health, Ogilvy Health, EVERSANA, Greater Than One, Real Chemistry, FCB Health, Saatchi & Saatchi Wellness, Havas Health, McCann Health

Signal Mix — Prompt B (Universal)

Run for all leads. Stop at first match. Works across pharma, agencies, and fintech without rewrites.

#	Signal	Recency	Hit rate	Where to look
B1	Open job posting for video / content / marketing production role	30d	~15-25%	LinkedIn Jobs, Indeed. Title contains "Video," "Multimedia," "Motion," "Content Producer," "Video Editor"
B2	New marketing / brand / content leader hired	90d	~20-30%	LinkedIn "Started new position" + vertical filter + marketing/content/brand titles

#	Signal	Recency	Hit rate	Where to look
B3	Underutilized long-form footage on brand channel (15+ min video, no <2-min cuts on social)	120d	~50-70%	YouTube / Vimeo brand channels, cross-check LinkedIn + Instagram for derivative cuts
B4	Image-heavy LinkedIn brand page (fewer than 3 videos in 120 days)	120d	~60-80%	Company LinkedIn page post feed; count video vs image/text posts
B5	Recent company growth / expansion announcement (any "we just X" post)	90d	~25-40%	Company LinkedIn brand page, press releases, "Newsroom" pages
B6	Recent funding / growth milestone	90d	~10-25% (vertical-dependent)	Crunchbase, TechCrunch, BioPharma Dive, Endpoints News
B7	Lead's most recent personal LinkedIn activity (guaranteed fallback)	30d	~85-95%	Lead's LinkedIn profile activity tab

Email 1 — Template

The trigger line is the variable. Everything else stays the same across all signals.

```
Subject: [trigger-anchored 2-4 word lowercase subject]

Hi [First Name],

[TRIGGER -- specific observation about the prospect,
tied to the signal that fired].

[PAIN -- what specifically hurts about this situation.
Granted to the trigger.]

[SOLUTION -- what Viral concretely does to fix the
pain. Specific and verifiable.]

Worth a quick look?

Cheers,

[Sender]
Viral Ideas Marketing
```

Word target: 70-85 words. No em dashes. No exclamation marks. No spam words. No bracket placeholders in the final render. No apologetic PS. Sign-off is signature only -- no in-body taglines.

The trigger, pain, and solution all change based on the signal that fired. The rest of the structure (greeting, CTA, sign-off) stays identical.

Trigger → Pain → Solution Library by Signal

This is the working library. For each signal: the subject, the trigger (Line 1), the pain (Line 2), and the solution (Line 3) Viral provides.

Prompt A — Pharma signals

Signal	Subject	Trigger	Pain	Solution
A1 FDA approval	[drug] launch	"Congrats on the FDA approval for [Drug] last [Month]."	"Launch quarters compress six weeks of HCP intros, sales enablement, and KOL content into med-legal at the same time. In-house production rarely scales fast enough for that sprint."	"Viral runs the editing team for your launch quarter. One dedicated editor across all assets, managing editor on regulatory QA, brief-on-the-first-try workflow that cuts revisions roughly in half."

Signal	Subject	Trigger	Pain	Solution
A2 Clinical trial readout	[trial] readout	"Saw the [Trial Name] Phase III readout from [Company] last [Month]."	"The 90 days between readout and launch usually means advisory board summaries, MOA explainers, and KOL interview cuts all queuing through med-legal at once. Each cycle adds 2-3 weeks to the next deliverable."	"Viral runs the pre-launch content backlog as one workflow. Same dedicated editor every week, managing editor catches regulatory issues before they reach your desk, finished cuts in days not weeks."
A3 Medical congress	[conference] content	"Saw [Company]'s team is presenting at [Conference] next month."	"Congress content has a hard deadline and three different audiences: HCP attendees, KOLs, and the field team. Most brand teams over-spec the deliverable count and under-deliver on quality."	"Viral builds the launch teaser, day-of clips, and recap series as one workflow with one editor. Brand voice stays consistent across all three audiences, regulatory QA baked in."
A4 Named pharma agency	agency overflow	"Saw [Company] credits [Agency] on the [Drug] work."	"Lead agencies are built for strategy and tentpole productions. The volume editing underneath usually bottlenecks at the agency's hourly rate, and switching agencies mid-launch is too risky."	"Viral plugs in as the editing layer underneath the lead agency, taking high-volume cuts off their plate. The agency keeps strategy and tentpole work, you get launch-quarter throughput without the rate spike."

Prompt B — Universal signals

Signal	Subject	Trigger	Pain	Solution
B1 Job posting	video specialist hire	"Saw [Company] is hiring a [Role Title] for the [Team] team."	"Full-time editors take 60-90 days to source, ramp, and reach productive output. The brand calendar doesn't pause while you hire."	"Viral's pod starts producing in week one with a dedicated editor and managing editor on QA. When the in-house hire ramps, Viral becomes the overflow layer."
B2 New marketing leader	new [role] start	"Congrats on the [Role] start at [Company]."	"First 90 days for most marketing leaders means a content stack audit while still shipping. Most in-house teams can't both audit and produce at the same cadence."	"Viral handles the production volume during the audit so the new leader's first quarter ships on cadence. Same dedicated editor every week, brand kit captured on call one."
B3 Underutilized long-form	your [topic] interview	"I saw [Company]'s recent [Topic] interview on the brand channel. [X] minutes of long-form."	"Most teams sit on long-form like this for weeks before short-form cuts ship. The production queue compounds with every derivative cut."	"Viral takes one long-form and ships 5-10 branded short-form pieces in 5 business days. Captions, brand kit, and platform-specific aspect ratios all built into the workflow."

Signal	Subject	Trigger	Pain	Solution
B4 Image-heavy LinkedIn	your video gap	"I noticed [Company] is posting [X] times a week on LinkedIn, mostly carousels and graphics."	"Image and carousel posts cap engagement at the algorithm ceiling. Adding video doubles the production load, which most in-house teams can't absorb on top of existing work."	"Viral produces the video layer on top of your existing posting cadence. Brand kit captured once, edited cuts ship weekly, no disruption to in-house workload."
B5 Growth announcement	[announcement] content	"Saw [Company]'s [Partnership / Office / Client / Campaign] announcement."	"Announcements trigger a content sprint: launch clips, internal comms, social cuts, and a recap deck for the next board update. In-house teams rarely scale up for the sprint, so quality drops."	"Viral's pod takes the sprint deliverables off your in-house team's plate. They ship on time, you don't burn out the existing editors, brand consistency stays intact."
B6 Funding round	[series] content	"Congrats on the [Series X]."	"Growth-stage funding usually means a creative-supply problem. Sales enablement, paid ads, recruiting content, and investor updates all need video at the same time, and hiring takes too long."	"Viral plugs in as the creative-supply layer in week one. Dedicated editor scales output as the team's needs grow, no hiring overhead, no ramp time."
B7 LinkedIn activity (fallback)	your [topic] post	"Saw your recent LinkedIn post on [Topic]."	"Most posts that land die after 7 days on the feed. Republishing as branded short-form video extends the lifespan, but most teams don't have the production capacity to do it consistently."	"Viral turns LinkedIn posts and other written assets into branded short-form videos in days. Captions, voiceover, brand kit baked in, ready to repost across channels."

Email 1 — Filled Example (Signal B3)

Subject: your moa interview

Hi Brittany,

I saw Ontada's recent MOA interview on the brand channel. 38 minutes of long-form.

Most teams sit on long-form like this for weeks before short-form cuts ship. The production queue compounds with every derivative cut.

Viral takes one long-form and ships 5-10 branded short-form pieces in 5 business days. Captions, brand kit, and platform-specific aspect ratios all built into the workflow.

Worth a quick look?

Cheers,

Sarah Stanfield

Word count: 79

Email 2 — Template (Lead-Magnet Pivot)

Same thread, approximately 3-5 days after Email 1. Pivots from product-tease to the lead magnet offer.

Subject: Re: [Email 1 subject]

Hi [First Name],

[New broader observation about the company -- their content cadence, recent activity, something visible. NOT a repeat of the Email 1 trigger].

Viral can turn any long-form video into a set of branded short-form cuts in days, eliminating the multi-week edit cycle most brand teams hit.

Interested in 5 short-form cuts from one of your existing long-forms? (on us)

Cheers,

[Sender]

Word target: 60-80 words

Email 2 — Filled Example

Subject: Re: your moa interview

Hi Brittany,

It looks like Ontada is putting out long-form content on a regular cadence - the MOA interview is one example.

Viral can turn any long-form video into a set of branded short-form cuts in days, eliminating the multi-week edit cycle most brand teams hit.

Interested in 5 short-form cuts from one of your existing long-forms? (on us)

Cheers,

Sarah Stanfield

Copy Rules (Non-Negotiable)

Pulled from the 2026 Brand Book and Viral's GTM playbook. Every email must pass these checks before send.

Rule	Why
50-80 words per email	Brand-book grade 8-10 reading level. Above 80 words loses the buyer.
Subject line: 2-4 words, lowercase, anchored to specific prospect-owned thing	"your moa interview" beats "video production services for pharma"
Person and company names always capitalized	Even in lowercase subject lines
No em dashes	Use sentence breaks or commas
No exclamation marks	Brand book: calm and confident, never urgent
No spam words (especially "free")	Replace with "on us"
No bracket placeholders in final render	Every variable must be resolved before send
No "Best, Sender Name" inside body	Signature handled by EmailBison {SENDER_EMAIL_SIGNATURE} system variable
No apologetic PS	"If this isn't a fit..." reads insecure. Calm and confident only.
No in-body taglines	Viral equivalent of BIGVU's "Be Brilliant On Camera" bug -- keep brand lines in signature
Soft yes/no CTA in Email 1	"Worth a quick look?" beats "Want a sample? 24 hours."
Lead magnet drops in Email 2 only	Email 1 teases the product. Email 2 offers the 5-cut pack.

Why This Structure Works

BIGVU has been running this exact structure for approximately 4 weeks at the time of writing. Stats:

- **Campaign 198:** 25,000+ sent, 285 replies (1.1%), 40 marked interested (14% positive-of-reply ratio)
- **Email 1 alone:** 156 of 270 unique replies (58% of all replies)
- **Email 2 alone:** 47 unique replies, 7 interested
- **Top-performing subject patterns:** your [city] listing, new [city] listing video, your [topic] interview

The same structural skeleton, dropped onto Viral's signals + Viral's lead magnet, is what this document encodes.

Operational Pre-Requisites Before Launch

These must be in place before Email 1 ships:

- **Sample delivery workflow.** When a prospect replies to Email 2 saying "yes, send the cuts," the team must be able to deliver the 5-cut pack within 24-48 hours. This is the single point in BIGVU's funnel that breaks (per Apr 30 call data -- positives go cold after Calendly pivot). Viral cannot fall into the same trap.

- **Vertical-matched case study assets.** Janssen, Cortechs.ai, Clever Digital, Self Financial -- all need at least a one-paragraph proof block ready to reference. Hard outcome numbers are the playbook gap.
- **Sender persona signature.** Name, brand, NYC location, phone number, website. Missing phone/address triggers scammer suspicion.
- **Signal-finder prompts deployed.** Prompt A and Prompt B running in Clay or equivalent, with priority-ordered evaluation logic.
- **Suppression list functional.** Negative replies, OOOs, and prior unsubscribes feed back into Clay / EmailBison suppression.

Open Decisions for Dave Before Launch

- HVAC vs. law firms in scope?
- Outcome metrics per vertical (the case-study hard numbers we currently lack)
- Pricing transparency in cold copy (\$1,500-\$5,000/mo in body, or price-discovery on call?)
- SaaS / pro services in or out of first 90 days?
- Coordination with existing Lead Hunter outbound (pause, parallel, or handoff?)
- Construction / remodeling angle -- kill or add?
- PR firms as a new vertical (per recent Devine Partners reply)?
