

Outbound Email System

Viral Ideas Marketing

Two funnels. Eleven buying signals.
The exact emails we plan to send.

Prepared 2026-05-16

Outreach Magic for Viral Ideas Marketing

What this is

The outbound system we're building for Viral, captured in one document.

Two funnels because your buyers want different things. Eleven buying signals because outbound that ignores triggers wastes everyone's time. Six full emails so you can see exactly what we plan to send before we send it.

You should be able to read this end to end in fifteen minutes. The six emails in the middle are the heart of it. Everything else explains why those emails look the way they do.

Three things to flag up front. Pricing stays off cold email until we agree it shouldn't. The free five-cut repurposing pack is the lead magnet we offer in the follow-up. And every email ends at the call to action, with no sign-off in the body, because Viral's email signature handles the rest.

The two funnels

Outbound for Viral splits into two motions because your buyers operate in different worlds.

Funnel A — Half-Time, \$2,500 a month

Built for two in-house buyers. The first is the mid-market marketing manager, the Sierra Bowman shape: she runs a one-to-three person team inside a fifty to five hundred million revenue company, signs off on five to ten thousand a month herself, and is personally on the hook every time video shows up off-brand in a Monday standup. The second is the growth marketer at a funded startup, the Lindsey McKone shape: VC or PE backed company, five to fifty million in revenue, weekly creative testing, paid social budget, fourteen-day refresh cycle that should have been five.

The hook for Funnel A is operational. Save the week. Stop being the bottleneck. The CMO stops asking about video. The freelancer who ghosted last quarter doesn't get to set the calendar.

Funnel B — Full-Time, \$4,760 a month

Built for the agency owner, the Daniel Rahmon shape: founder or CEO of a five to fifty million revenue marketing or content agency, thirty to a hundred and fifty staff, retention is the whole job. Different math from Funnel A. Agencies don't have a CMO problem; they have a margin problem. Every account they lose is margin lost. Every full-time editor they hire is dead weight on slow weeks.

The hook for Funnel B is structural. White-label production. Dedicated editor per account who sits inside the client's Slack channel under the agency's brand. The client never knows a vendor exists. The agency's renewal book gets cleaner.

And two we win when they come to us

Brittany at Ontada and Adam at Asset Map are the enterprise pharma director and the eight-year-tenure founder, respectively. They're opportunistic plays. We win them when they walk in, but we're not spending paid budget chasing them. They get a third, lighter track.

How we find prospects

Signal-first sourcing. We don't blast to everyone in healthcare or every agency in the country. We find prospects in the middle of a buying moment and write to that moment.

The signal logic runs in priority order. Strongest signal fires first; the rest of the cascade only runs if no higher-priority signal is found. For a pharma or biotech lead, we check pharma-specific signals first and fall through to the universal set. For any other lead, we run the universal set directly.

Pharma-specific signals

Signal	What we look for	Window
FDA approval or new indication	Drugs@FDA, FDA press releases, company 8-K filings	Last 90 days
Clinical trial milestone	ClinicalTrials.gov status updates, Phase III readouts, primary endpoint announcements	Last 90 days
Upcoming medical congress	Accepted abstracts, posters, symposia at ASH, ASCO, AHA, ESMO, AAD, BIO, JPM Healthcare	Next 60 days
Currently using a named pharma video agency	Agency-of-record credits, press releases, LinkedIn employee bios	Verified in last 12 months

Universal signals

Signal	What we look for	Window
Open job posting for a video, content, or production role	LinkedIn Jobs and Indeed listings	Last 30 days
Freelance editor publicly open to work after recent client engagement	LinkedIn open-to-work flag plus prior project history with the target	Last 30 days
New marketing, brand, or content leader hired	LinkedIn "started new position" with target company and a marketing or content title	Last 90 days
Underutilized long-form footage on brand channel	Brand YouTube or Vimeo with a fifteen-plus minute video and no short-form derivative on LinkedIn or Instagram	Last 120 days
Image-heavy LinkedIn brand page	Corporate page posting weekly with fewer than three videos in the window	Last 120 days
Recent growth, expansion, or new client win announcement	Company LinkedIn brand posts, press releases, newsroom pages	Last 90 days

Signal	What we look for	Window
Recent funding or growth milestone	Crunchbase, TechCrunch, BioPharma Dive, Endpoints News	Last 90 days
Agency RFP for video editing partners (Funnel B)	Public RFP posts on LinkedIn or agency-specific job boards	Last 30 days
Quarterly renewal-cycle boundary (Funnel B)	Calendar trigger at end of each quarter	Continuous
Lead's most recent LinkedIn activity (guaranteed fallback)	Profile activity tab for any post, comment, or repost	Last 30 days

The email sequence

Two emails per prospect. Same thread.

The first email teases the product. The second offers the lead magnet.

Email 1 has four moves

- **The trigger.** One sentence on what we observed about the prospect. The address of their listing, the role they're hiring, the announcement they made. Specific.
- **The pain.** One paragraph in their own words on what hurts. The freelancer ghosted. The brief intake got sloppy. The renewal cycle has a client flagging video.
- **The solution.** One paragraph that names a real client, a specific workflow step, the SLA, the tool, and the QA gate. The kind of detail only Viral can say.
- **The call to action.** A soft yes-no for most signals ("Worth a look for [their company]?"). A diagnostic offer for high-commitment signals ("Open to a 15-minute diagnostic?").

The email ends at the call to action. No "Cheers, Sarah." No tagline. EmailBison's signature variable handles the sign-off.

Email 2 lands the magnet

Sent three to five days after Email 1, same thread. Opens with a short paragraph drawing the pattern from our case files ("Almost every team we work with came to us after a freelancer ghosted mid-campaign"). One sentence describing what Viral physically does. And the offer:

"Interested in 5 short-form cuts from one of your existing long-forms? (on us)"

That offer is the door. When a prospect says yes, we send the cuts inside five business days, branded and captioned, ready to post. The cuts are how the conversation starts, not how it ends. After delivery, the diagnostic call comes naturally.

Subject lines

Two to four words, lowercase, built to create a small curiosity gap.

Four patterns work. The first three are the workhorses; the fourth is for time-specific moments.

Pattern	What it does	Examples
Before [their action]	Hints at an alternative they haven't considered	before you hire, before the hire
After [their event]	Implies and-now-what	after the raise, after the approval, after the win
Their [thing], [twist]	Possessive with an intriguing modifier	your q4 book, your freelancer gap, your interview, untouched
Time-bound reference	Names the window the prospect is in	first 90 days, six week sprint

Things we avoid: urgency words (now, closing, last chance), hype words (revolutionary, game-changing, world-class), and generic placeholders (quick question, video editing services). Your brand voice is calm and confident; the subject line is the first place a prospect tests whether we know that.

What makes a solution strong

The solution paragraph is the part most cold emails miss.

A weak solution lists features. Dedicated editor, fast drafts, good QA. Every subscription editing service in the category says some version of that. Nothing about it tells the reader why Viral instead of any other vendor at the same price.

A strong solution does three things in three sentences. First, it names a real client and how they specifically use Viral — output volume, channel, deliverable type. "Self Financial runs their video through our pod" beats "we work with Fortune 500s."

Second, it names a workflow step or a measurable outcome. The editor learned the brand from the kit handoff. The editor was catching drift by video three. A six-week cycle shrank to two. New ad variants ship twice a week. These sentences are not feature claims. They're observable details from how Viral actually delivers, the kind of thing a competitor can't just copy.

Third, it names the SLA, the tool, and the QA gate. Drafts back in twenty-four hours through Frame.io with timestamped notes. Every cut clears a Project Manager QC pass before it ships. The editor sits inside the client's Slack channel under the agency's brand. Named workflow elements beat adjectives every time.

The test we apply when we write a solution: if a sentence could be said by any subscription editing service, we replace it. Strong solutions name what only Viral could name.

Six emails we'd send today

What follows is six prospect pairs. The trigger, the email, the follow-up.

Names and companies are illustrative. The structure and copy are ready. If you want to swap a case study or a phrase, this is the page to mark up.

Maya Reyes, Senior Marketing Manager, Step

Funnel A. Trigger: open video editor job posting last week.

EMAIL 1

Subject: before you hire

Hi Maya, saw Step is hiring a Video Editor. Most of our clients came to us right after a freelancer ghosted before a launch or a quarterly review. The math on hiring full-time usually doesn't survive a slow quarter either.

Self Financial runs their video through our pod. The editor learned the brand from the kit handoff and was catching brand drift by video 3. Drafts back in 24 hours through Frame.io with timestamped notes, every cut clears a Project Manager QC pass before it ships.

Worth a look for Step?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: before you hire

Almost every team we work with came to us after a freelancer ghosted mid-campaign. The pattern is consistent enough we built the model around it.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, ready to post on LinkedIn or YouTube.

Interested in 5 short-form cuts from one of your existing Step long-forms? (on us)

Tom Diaz, Head of Growth, Mercury

Funnel A. Trigger: Mercury closed Series C last quarter.

EMAIL 1

Subject: after the raise

Hi Tom, congrats on Mercury's Series C last quarter. The 90 days after a round usually mean creative supply becomes the bottleneck. Sales enablement, paid ads, recruiting content, and investor updates all need video at once, and hiring takes too long.

Gainbridge, the growth team inside Group 1001 with about 160 billion in AUM, runs their paid-creative testing through our pod. New ad variants ship twice a week. Hook and retention feedback baked into every test, so the editor knows what scored before shipping the next.

Open to a 15-minute diagnostic?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: after the raise

Most growth teams that come to us have run paid for a quarter on a 14-day refresh cycle that should have been 5. The vendor couldn't keep up.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, ready for paid or organic.

Interested in 5 short-form cuts from one of your existing Mercury long-forms? (on us)

Sarah Chen, CEO, Anomaly

Funnel B. Trigger: open Senior Video Editor job posting at the agency.

EMAIL 1

Subject: before the hire

Hi Sarah, saw Anomaly is hiring a Senior Video Editor. Most agencies that come to us tried to hire their way out and the math broke. A full-time editor is dead weight on slow weeks, and the brand calendar doesn't pause while you ramp.

Clever Digital Marketing, a Canadian agency running about 80 staff, runs our team behind their accounts white-label. The editor sits inside each client's Slack under their brand. Same-day first drafts on Full-Time, revisions in Frame.io, every cut clears the account lead's QC pass before going client-facing.

Worth a look for Anomaly?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: before the hire

Most agencies come to us after a vendor that survived strategy meetings but missed the client deliverable date. The math at signup stops working by month three.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, ready to deliver under your label.

Interested in 5 short-form cuts from one of your existing client long-forms? (on us)

Jessica Park, VP Marketing, Cala Health

Funnel A. Trigger: Jessica started as VP Marketing six weeks ago.

EMAIL 1

Subject: first 90 days

Hi Jessica, congrats on the VP Marketing start at Cala Health. First 90 days for most marketing leaders means an audit of the content stack while the calendar keeps moving. The brief intake usually gets sloppy and video falls behind first.

Self Financial runs their content production through our pod for exactly this. Brand kit captured on call one, locked into a templates library the editor pulls from. By video 3, the editor was catching brand drift before their marketing lead saw it. First drafts back in 24 hours.

Worth a look for Cala?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: first 90 days

The most common story we hear is great first month, quality slip by month four. Usually that means the vendor scaled the account through a pool. We don't run pools.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, ready to post.

Interested in 5 short-form cuts from one of your existing Cala Health long-forms? (on us)

Rachel Park, Senior Marketing Director, Eli Lilly Oncology

Opportunistic enterprise pharma. Trigger: FDA approval at Lilly Oncology last month.

EMAIL 1

Subject: after the approval

Hi Rachel, congrats on the FDA approval at Lilly Oncology last month. Most enterprise launches need approval-friendly volume that survives legal review on the first pass. Most vendors don't survive enterprise governance.

Ontada, the McKesson healthcare-data subsidiary, runs their HCP and clinical-trial cuts through our pod. By the third project, the editor learned the compliance pattern: how their legal team flags claims, how their brand team catches color and font misuse, what triggers a redaction. A six-week cycle shrinks to two.

Open to a 15-minute diagnostic?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: after the approval

Enterprise teams usually come to us after a vendor couldn't survive legal and brand-compliance review. We've built around the approval cycle, not against it.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Lilly long-forms? (on us)

Marcus Webb, COO, Sage Communications

Funnel B. Triggers stacked: new client win announcement plus end-of-Q4 renewal cycle.

EMAIL 1

Subject: your q4 book

Hi Marcus, saw Sage just announced the new client win. Most agencies hitting Q4 with new accounts and an in-house team already at capacity see existing clients start asking pointed questions about turnaround.

Clever Digital Marketing runs our team behind five of their accounts white-label. The editor learned each client's brand from the kit handoff and was catching brand drift by the third project. Same-day first drafts on Full-Time, Slack response inside the hour, every cut clears the account lead's QC pass before going client-facing.

Their renewal book got cleaner. Clients never knew.

Worth a look for Sage?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: your q4 book

Most agencies that come to us have a renewal book with one or two accounts flagging video as a churn risk. The vendor scaled the team through a pool. We don't.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, ready to deliver under your label.

Interested in 5 short-form cuts from one of your existing client long-forms? (on us)

How your buyers talk

When clients describe what brought them to Viral, they don't talk like marketers. They talk like people whose week just broke.

We use their exact words in the pain paragraph of Email 1. Those words make the prospect feel seen, not pitched. The phrasing is theirs, not ours.

Words every buyer uses

Ghosted. Dropped the ball. Off brand. Inconsistent. Unreliable. Another fire drill. I'm drowning. Out of bandwidth. We keep starting over. The last batch was rough. I just need someone I can trust. We can't scale this. I need a real team, not a freelancer.

Words agencies use

White-label. Dedicated editor. We need someone who can ramp without us teaching them everything. The client noticed.

Words enterprise marketers use

Approval friendly. On brand at scale. We can't have surprises.

These are the pain lines. They're not adjectives we'd pick; they're sentences your clients have already said to you. The pain paragraph of every Email 1 above pulls from this list.

What's in every email

A condensed reference for the rules every email respects.

- Fifty to one hundred words. Past one hundred, you lose the buyer.
- Subject is two to four words, lowercase, anchored to something specific the prospect owns.
- No em dashes. Use sentence breaks or commas instead.
- No exclamation marks. Brand voice is calm and confident.
- No dollar symbols. Pricing belongs on the call, not in cold copy.
- No "free." We use "on us" or "complimentary."
- No bracket placeholders in the final render. Every variable resolved before send.
- No sign-off in the body. EmailBison's signature variable handles "Best, [Name]."
- No apologetic PS lines. "If this isn't a fit" reads insecure. Calm and confident only.
- No in-body taglines. Brand lines live in the signature.
- Email 1 ends at the call to action. Nothing follows it.
- Email 2 lands the magnet offer: "Interested in 5 short-form cuts from one of your existing long-forms? (on us)"
- Funnel-matched case study every time. Self Financial or Gainbridge for Funnel A. Clever Digital for Funnel B. Ontada or Asset Map for opportunistic plays.

Three more notes worth flagging.

Pricing is the one item still open. The default position is that we don't put numbers in cold copy because pricing belongs on the discovery call. If you want it included, we'll test it as a variant in healthcare first.

Sender persona is a separate decision. We need to spin up a Viral-branded sender (name, signature, NYC office address, phone number) before the first send. This is the single biggest trust signal in the entire system; missing it triggers scam suspicion, especially on a new domain.

The lead magnet workflow has to be operational before the first email ships. When a prospect replies to Email 2 asking for the five cuts, the team needs to deliver inside forty-eight hours. That's the conversion moment, and it's the one piece of the system that lives outside this document.
