

Outbound Email System

Viral Ideas Marketing

Healthcare and pharma focus.

Ten buying signals. Six emails ready to send.

Prepared 2026-05-16

Outreach Magic for Viral Ideas Marketing

What this is

The outbound system we're building for Viral, focused on healthcare and pharma for the first 90 days.

Ten buying signals because outbound that ignores triggers wastes everyone's time. Six full emails so you can see exactly what we plan to send before we send it.

You should be able to read this end to end in fifteen minutes. The six emails in the middle are the heart of it. Everything else explains why those emails look the way they do.

Three things to flag up front. Pricing stays off cold email until we agree it shouldn't. The free five-cut repurposing pack is the lead magnet we offer in the follow-up. And every email ends at the call to action, with no sign-off in the body, because Viral's email signature handles the rest.

Who we're targeting

Healthcare and pharma marketing leaders. First 90 days. One vertical at a time.

The Discovery work named five archetypes Viral wins with. For the first ninety days of outbound we focus on the three that live in healthcare and pharma.

The marketing manager at a healthcare brand

Mid-market marketing manager or senior marketing manager running a one-to-three person team inside a pharma, biotech, or healthcare brand. She runs a content quota that keeps growing, a freelancer rotation that keeps breaking, and a CMO who walks into the Monday standup and asks pointed questions about video. She's competent and tired of being the last line of defense when a vendor disappears.

The senior marketing director at an enterprise subsidiary

Senior marketing director or business director running a brand inside a McKesson, Johnson and Johnson, or BMS-shape parent company. Budget isn't the friction. Trust and risk are. She won't buy from a vendor that can't survive legal review, brand-compliance audits, and procurement. Her name is on the PO when something goes wrong.

The growth marketer at a funded biotech or health-tech startup

Growth marketer, performance marketer, or demand-gen lead at a VC or PE backed biotech or health-tech company in the five to fifty million revenue range. Her metric is CAC. Her cadence is weekly creative testing. She doesn't care if the video wins a Cannes Lion. She cares that the hook works in three seconds and the retention curve holds.

Outside of healthcare, two other archetypes (agency owners and B2B founders) will get their own playbooks once we validate the healthcare motion in the first 90 days. Not in scope for this document.

How we find prospects

Signal-first sourcing. Ten triggers, run in priority order. Stop at the first match.

For each lead, we check the pharma-specific signals first. If none fire, we run the universal set. The same lead never gets two emails about two different triggers; the strongest one wins.

Pharma-specific signals

Signal	What we look for	Window
FDA approval or new indication	Drugs@FDA, FDA press releases, company 8-K filings	Last 90 days
Phase III readout or trial milestone	ClinicalTrials.gov status updates, primary endpoint announcements	Last 90 days
Upcoming medical congress	Accepted abstracts and posters at ASH, ASCO, AHA, ESMO, AAD, BIO, JPM Healthcare	Next 60 days
Currently using a named pharma video agency	Agency-of-record credits in press releases and LinkedIn employee bios	Verified in last 12 months

Universal signals

Signal	What we look for	Window
Open job posting for a video, content, or production role	LinkedIn Jobs and Indeed listings at healthcare companies	Last 30 days
New marketing, brand, or content leader hired	LinkedIn "started new position" at a healthcare company with a marketing or content title	Last 90 days
Underutilized long-form footage on brand channel	Brand YouTube or Vimeo with a 15-plus minute KOL or webinar video and no short-form derivative	Last 120 days
Image-heavy LinkedIn brand page	Corporate page posting weekly with fewer than three videos in the window	Last 120 days
Recent growth, expansion, or new client win announcement	Company LinkedIn brand posts, press releases, newsroom pages	Last 90 days
Recent funding or growth milestone (biotech, health tech)	Crunchbase, TechCrunch, BioPharma Dive, Endpoints News	Last 90 days

The email structure

Two emails per prospect, same thread.

The first email anchors a buying trigger. The second offers the lead magnet.

Email 1 has four moves

- **The trigger.** One sentence on what we observed about the prospect. FDA approval, hire posted, abstract accepted, KOL interview uploaded. Specific.
- **The poke-the-bear question.** Right after the trigger, a question that makes the prospect nod silently. "Are you about to spend six weeks pushing HCP cuts through med-legal at the same time?" The prospect's own internal voice, not ours.
- **The solution.** One paragraph that names a real client (Janssen or Ontada), the benefit they get (not the feature we provide), and a defused objection in two to five words. "Approval-friendly from day one." "No ghosting, no ramp gap."
- **The call to action.** Soft, specific, named. "Worth a look for [Company]?" or "Open to a 15-minute walkthrough?"

The email ends at the call to action. No "Cheers, Sarah." No tagline. EmailBison's signature variable handles the sign-off.

Email 2 lands the magnet

Sent three to five days after Email 1, same thread. Opens with one short paragraph drawing the pattern from our case files ("Enterprise teams usually come to us after a vendor couldn't survive legal review"). One sentence describing what Viral physically does. And the offer:

"Interested in 5 short-form cuts from one of your existing long-forms? (on us)"

When a prospect says yes, we send the cuts inside five business days, branded and captioned and ready to post. The cuts are how the conversation starts, not how it ends. After delivery, the diagnostic call comes naturally.

Subject lines

Every subject is generated from a template plus the prospect's specific data.

Seven templates cover every signal we run. The right template gets picked automatically based on which signal fired for the lead. The subject always references something specific to the prospect (their company name, drug, event, hire, or content asset) — never generic placeholders.

The seven templates

Template	Pattern	When picked
Possessive	{Company}'s {their thing}	FDA approval, underutilized content, LinkedIn cadence
Location pin	{Company} at {event}	Medical congress signals
Time anchor	Before or After {their event}	Phase III readout, growth announcement, new leader
Pairing	{their trigger} + {consequence}	Video editor hire, named agency relationship
Name + topic	{First name}, {after/before/about} {their thing}	Funding round, peer-to-peer feel
Observational	Saw {their specific signal}	Public signal (LinkedIn post, YouTube upload, press release)
Window	{Company}, the next {timeframe}	Quarterly or launch-window framing

How they render across the six prospects

Prospect	Signal	Template	Subject
Rachel, Lilly Oncology	FDA approval	Possessive	Eli Lilly Oncology's launch calendar
Maya, Karuna Therapeutics	Video editor hire	Pairing	Karuna's editor hire + the launch calendar
David, BMS Hematology	ASCO abstract	Location pin	BMS Hematology at ASCO next month
Sarah, Sage Therapeutics	Phase III readout	Time anchor	After Sage Therapeutics' Phase III readout
Jessica, Karyopharm	Underutilized KOL	Observational	Saw Karyopharm's 38-minute KOL interview

Prospect	Signal	Template	Subject
Daniel, Inozyme Pharma	Series C funding	Name + topic	Daniel, after Inozyme's Series C

Subject line — when no signal fires

If the signal-finder returns nothing usable, the default still feels personalised because it names the company.

The fallback uses a Possessive template with a universal pharma noun. Personalisation by company name; specificity by the pharma-specific noun. If the prospect's role is known, the default varies slightly to match how that role thinks about content.

Role detected	Default fallback subject
Marketing Manager / Senior Marketing Manager	{Company}'s launch calendar
Senior Marketing Director / Brand Director	{Company}'s med-legal queue
Growth Marketer / Performance Marketer	{Company}'s creative refresh
VP Marketing / CMO / Head of Marketing	{Company}'s content engine
No role data available	{Company}'s launch calendar

One important rule for the no-signal case:

If no signal fires AND we can't find a recent LinkedIn post or comment from the lead either, we don't email them. The Email 1 body needs a real trigger and poke-the-bear question to work; sending into an empty trigger produces weak copy and burns the sending domain's reputation. Filter the lead from the campaign list until a signal appears.

What we avoid in subject lines

Urgency words (now, closing, last chance). Hype words (revolutionary, game-changing, world-class). Generic placeholders (quick question, video editing services). Fake threading (Re : or Fwd : without a real thread). ALL CAPS. Multiple punctuation. Dollar-symbol claims. Your brand voice is calm and confident; the subject line is the first place a prospect tests whether we know that.

The solution paragraph

The part most cold emails miss.

A weak solution lists features. Dedicated editor, fast drafts, good QA. Every subscription editing service in the category says some version of that. Nothing in it tells the reader why Viral instead of any other vendor.

A strong solution does three things in three sentences.

First, it names a real pharma client and how they use Viral. For Viral's first 90 days that's almost always **the team at Janssen** or **brand teams at Ontada**. One named anchor per email.

Second, it names the benefit or result the buyer gets. Not the feature we provide. "The calendar holds and the CMO stops asking about video in standup" beats "dedicated editor with QA pass." Features only earn a sentence when they're directly tied to a measurable outcome ("the six-week cycle shrinks to two" is fine because it pairs the workflow with the result).

Third, it defuses the biggest objection at the trigger in two to five words. "Approval-friendly from day one." "Built for med-legal review." "No ghosting, no ramp gap." Short enough to land, specific enough to neutralize.

The objection map

Defuse phrase	Handles the objection
"Approval-friendly from day one"	Will they survive enterprise governance?
"Regulatory-aware from day one"	Do they understand compliance?
"Built for med-legal review"	Will they understand our review process?
"Compliance-aware from day one"	Can they touch HCP-targeted content?
"No ghosting, no ramp gap"	What if they disappear like the last freelancer?
"No ramp time"	Can they start fast enough to matter?

Six emails we'd send today

Six healthcare prospects. The trigger, the email, the follow-up.

Names and companies are illustrative. The structure and copy are ready. If you want to swap a case study or a phrase, this is the page to mark up.

Rachel Park, Senior Marketing Director, Eli Lilly Oncology

Pharma. Trigger: Eli Lilly Oncology received FDA approval last month.

EMAIL 1

Subject: Eli Lilly Oncology's launch calendar

Hi Rachel,

Saw Eli Lilly Oncology just got the FDA approval last month. Are you about to spend six weeks pushing HCP cuts, sales enablement, and KOL interviews through med-legal at the same time?

The team at Janssen runs launch quarters through us. The calendar holds and the CMO stops asking about video in standup. Approval-friendly from day one.

Open to a 15-minute walkthrough for Lilly?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: Eli Lilly Oncology's launch calendar

Enterprise teams usually come to us after a vendor couldn't survive legal and brand-compliance review. We've built around the approval cycle, not against it.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Lilly long-forms? (on us)

Maya Reyes, Senior Marketing Manager, Karuna Therapeutics

Pharma. Trigger: Karuna Therapeutics posted an open Senior Video Editor role.

EMAIL 1

Subject: Karuna's editor hire + the launch calendar

Hi Maya,

Saw Karuna Therapeutics is hiring a Senior Video Editor. Are you covering the launch calendar yourself until that role ramps in three months?

Brand teams at Ontada use us instead of hiring. The launch ships on cadence through every search, no one apologizes for video in standup, and the brand stays consistent without daily babysitting. No ghosting, no ramp gap.

Worth a look for Karuna?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: Karuna's editor hire + the launch calendar

Almost every team we work with came to us after a freelancer ghosted mid-campaign. The pattern is consistent enough we built the model around it.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Karuna long-forms? (on us)

David Chen, Senior Brand Director, BMS Hematology

Pharma. Trigger: BMS Hematology's abstract was accepted for ASCO next month.

EMAIL 1

Subject: BMS Hematology at ASCO next month

Hi David,

Saw BMS Hematology's abstract accepted for ASCO next month. Are the launch teaser, day-of cuts, and recap series queued for legal yet, or is the brand team starting the build the week of?

The team at Janssen runs congress content through us. The full set ships in time, the brand voice stays consistent across all three audiences, and no one chases the editor for the day-of clip. Regulatory-aware from day one.

Worth a 15-minute walkthrough?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: BMS Hematology at ASCO next month

Most pharma teams sit on long-form for weeks because the repurposing cycle keeps colliding with med-legal review. We've built the workflow around that constraint.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing BMS long-forms? (on us)

Sarah Lee, Senior Marketing Director, Sage Therapeutics

Pharma. Trigger: Sage Therapeutics published the Phase III readout.

EMAIL 1

Subject: After Sage Therapeutics' Phase III readout

Hi Sarah,

Saw Sage Therapeutics just published the Phase III readout. Is the pre-launch content already queued, or are advisory boards, MOA explainers, and KOL cuts about to hit med-legal at the same time?

Brand teams at Ontada run pre-launch content through us. The six-week cycle shrinks to two and the team ships without the firefights. Built for med-legal review.

Open to a 15-minute walkthrough?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: After Sage Therapeutics' Phase III readout

Enterprise teams usually come to us after a vendor couldn't survive legal and brand-compliance review. We've built around the approval cycle, not against it.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Sage long-forms? (on us)

Jessica Park, VP Marketing, Karyopharm Therapeutics

Pharma. Trigger: Karyopharm uploaded a 38-minute KOL interview to YouTube with no short-form derivative.

EMAIL 1

Subject: Saw Karyopharm's 38-minute KOL interview

Hi Jessica,

Saw Karyopharm's recent KOL interview on the brand channel. 38 minutes on YouTube, no shorter cuts anywhere. Is the short-form derivative queued, or has med-legal review killed the repurposing cadence again?

Brand teams at Janssen run KOL repurposing through us. One long-form becomes 5 to 10 branded short-form pieces and the LinkedIn cadence holds without the rebrief cycle. Compliance-aware from day one.

Worth a look for Karyopharm?

EMAIL 2 (same thread, 3 to 5 days later)

Subject: re: Saw Karyopharm's 38-minute KOL interview

Most pharma teams sit on long-form for weeks because the repurposing cycle keeps colliding with med-legal review. We've built the workflow around that constraint.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Karyopharm long-forms? (on us)

Daniel Hwang, VP Marketing, Inozyme Pharma

Biotech. Trigger: Inozyme Pharma closed Series C funding last month.

EMAIL 1

Subject: Daniel, after Inozyme's Series C

Hi Daniel,

Saw Inozyme Pharma just closed Series C. Are the launch teasers, investor updates, recruiting content, and KOL clips all about to land on the same week without a production team ramped up?

Brand teams at Ontada use us through funding cycles like this. Creative supply scales with the calendar and the CMO doesn't ask why the recap is late. No ramp time.

Open to a 15-minute walkthrough?

EMAIL 2 (same thread 3 to 5 days later)

Subject: re: Daniel, after Inozyme's Series C

Most growth-stage teams come to us after a quarter where creative supply couldn't keep up with the calendar. Hiring takes too long, vendors collapse under volume.

Viral takes any long-form video and ships 5 short-form pieces in 5 business days. Branded, captioned, regulatory-aware.

Interested in 5 short-form cuts from one of your existing Inozyme long-forms? (on us)

How your buyers talk

When clients describe what brought them to Viral, they don't talk like marketers. They talk like people whose week just broke.

We use their exact words in the poke-the-bear question and the pain framing. The phrasing is theirs, not ours.

Operational pain (marketing manager and growth marketer)

Ghosted. Dropped the ball. Off brand. Inconsistent. Unreliable. Another fire drill. I'm drowning. Out of bandwidth. We keep starting over. The last batch was rough. I just need someone I can trust. We can't scale this. I need a real team, not a freelancer.

Enterprise pharma pain (senior marketing director at subsidiary)

Approval friendly. On brand at scale. We can't have surprises. Six-week cycle. Med-legal review. Regulatory pass. Brand compliance audit. Missed redaction. Legal flag.

These are the pain lines. They're not adjectives we'd pick; they're sentences your clients have already said to you. The poke-the-bear question of every Email 1 above pulls from this list.

What's in every email

A condensed reference for the rules every email respects.

- Sixty to one hundred words. Past one hundred, you lose the buyer.
- Subject is two to four words, lowercase, anchored to something specific the prospect owns.
- No em dashes. Use sentence breaks or commas instead.
- No exclamation marks. Brand voice is calm and confident.
- No dollar symbols. Pricing belongs on the call, not in cold copy.
- No "free." We use "on us" or "complimentary."
- No bracket placeholders in the final render.
- No sign-off in the body. EmailBison's signature variable handles "Best, [Name]."
- No apologetic PS. "If this isn't a fit" reads insecure. Calm and confident only.
- No in-body taglines. Brand lines live in the signature.
- Email 1 ends at the call to action. Nothing follows it.
- Email 2 lands the magnet offer: "Interested in 5 short-form cuts from one of your existing long-forms? (on us)"
- Case study is always pharma or healthcare. Janssen or Ontada for v1.
- Solution leads with benefits and results, not features. Features only when directly tied to a measurable outcome.

Three more notes worth flagging.

Pricing is the one item still open. The default position is that we don't put numbers in cold copy because pricing belongs on the discovery call. If you want it included, we'll test it as a variant after the first month of sends.

Sender persona is a separate decision. We need to spin up a Viral-branded sender (name, signature, NYC office address, phone number) before the first send. Missing phone or address triggers scam suspicion, especially on a new domain.

The lead magnet workflow has to be operational before the first email ships. When a prospect replies to Email 2 asking for the five cuts, the team needs to deliver inside forty-eight hours. That's the conversion moment, and it lives outside this document.
